☐  (<https://classroom.emeritus.org/courses/16839/modules/items/3582962>)

Learning Outcomes Addressed

- Understand how AI, GenAI and Agentic AI work and where they apply in business.
- Use prompts effectively for analysis, decision-making and content generation.
- Map business workflows and identify where AI can drive automation and efficiency.
- Evaluate AI opportunities using feasibility, ROI and impact criteria.
- Build AI adoption roadmaps aligned to business goals and KPIs.
- Apply data governance, privacy and ethical AI principles.

Phase 6 – Future and Synthesis

Milestone 14: Executive AI Transformation Proposal

Estimated Effort: 2 Hours

Objective

In this final module, you will consolidate the work completed throughout the capstone project into a **comprehensive executive AI transformation proposal**.

Across previous modules, you have progressively developed the components required to design and evaluate an AI-enabled business solution. These included:

- analysing the current workflow and operational baseline
- identifying opportunities for Generative AI and workflow automation
- designing AI prompts and workflow improvements
- developing agent architectures and automation logic
- estimating financial impact and operational efficiency gains
- validating strategic alignment and industry context
- designing enterprise deployment architecture
- defining governance and risk management controls
- planning future AI capability expansion

In this final deliverable, you will **synthesise these elements into a structured proposal that demonstrates how AI can create measurable business impact.**

Your report should present the AI initiative as if it were being **submitted to organisational leadership for strategic approval and investment.**

Important: This Final Deliverable Builds on Earlier Modules

The final proposal is **not a completely new assignment.**

Instead, it integrates and refines the work you completed across earlier modules. You are encouraged to **reuse, improve, and synthesise your previous analyses and designs**, rather than starting from scratch.

The goal is to transform the outputs from earlier milestones into a **coherent executive proposal describing a complete AI transformation initiative.**

How Previous Modules Contribute to the Final Proposal

Final Proposal Section	Key Inputs from Earlier Modules
Problem Overview	Module 1 and 2 – Workflow Baseline & Risk Canvas
Workflow Baseline	Module 2 – Current workflow analysis and process structure

Final Proposal Section	Key Inputs from Earlier Modules
GenAI Opportunity	Module 3 – Prompt Architecture Design Module 5 – AI Workflow Redesign
Agent Design	Module 6 – Agent Architecture Blueprint Module 7 – Human-in-the-Loop Responsibility Model Module 8 – Autonomous Workflow & Failure Design
Financial Impact	Module 4 – Efficiency & Financial Impact Model
Strategy Alignment	Module 9 – Strategic Validation & Investment Brief Module 10 – Industry Benchmark & Competitive Positioning
Governance & Risk Management	Module 12 – AI Governance & Control Framework
Implementation Architecture	Module 11 – Enterprise Architecture & Vendor Strategy
Implementation Roadmap	Module 13 – Three-Phase AI Capability Roadmap (Pilot → Scale → Autonomous Expansion)

Your task is to **integrate these components into a clear and well-structured executive report.**

Note: This is a required assignment and counts towards programme completion.

Task Overview

You will produce a **Executive AI Transformation Proposal** that presents your AI solution as a strategic initiative for the organisation.

The report should clearly explain:

- the business problem addressed
- the current operational workflow
- how AI improves the process
- the architecture of the AI solution

- the expected financial impact
- the strategic value for the organisation
- governance and risk management controls
- the roadmap for implementation

The goal is to demonstrate your ability to **design, evaluate, and communicate a practical AI transformation initiative.**

Required Report Structure

Your final proposal should include the following sections.

1. Problem Overview

Begin by describing the **business problem or operational challenge** addressed by your AI solution.

Explain:

- the organisational context
- why the problem matters operationally or financially
- which teams or processes are affected

This section should clearly articulate **why solving this problem is important for the organisation.**

2. Workflow Baseline

Describe the **current workflow before AI implementation.**

Include:

- the key steps in the existing process
- where manual work occurs
- operational inefficiencies or bottlenecks
- quality risks or delays

You may present the workflow using:

- step descriptions
- process tables
- workflow diagrams

This section helps readers understand **how the process currently operates and where improvements are needed.**

3. Generative AI Opportunity

Explain how **Generative AI improves or transforms the workflow.**

Describe:

- which tasks AI performs
- which tasks remain human-controlled
- how the workflow changes after AI implementation

Focus on the **operational value created by introducing AI.**

Examples may include:

- automation of repetitive tasks
 - faster document processing
 - improved response generation
 - enhanced operational efficiency
-

4. Agent Design

Summarise the **AI architecture and agent design** supporting your solution.

Include:

- the objective of the AI agent
- planning and execution steps
- tool integrations and system interactions
- memory design (if applicable)
- human-in-the-loop checkpoints

This section explains **how the AI system performs workflow tasks within the enterprise environment.**

5. Financial Impact

Present the **economic value of the AI solution.**

This section should summarise:

- time savings from automation
- operational cost reductions
- estimated implementation costs
- expected return on investment

Where possible, include simple calculations such as:

- annual hours saved
- estimated cost reductions
- multi-year ROI

The goal is to demonstrate that the AI initiative delivers **clear financial value**.

6. Strategy Alignment

Explain how the AI initiative supports **broader organisational strategy**.

Consider alignment with:

- operational efficiency goals
- digital transformation initiatives
- improved customer experience
- long-term innovation capability

You may also reference **industry benchmarking insights** identified earlier in the capstone.

7. Governance & Risk Management

Describe the **governance framework** required to deploy the AI solution responsibly.

Your discussion may include:

- data privacy protections
- hallucination mitigation mechanisms
- bias monitoring processes
- monitoring systems and audit trails
- incident response procedures

This section demonstrates that the AI system can operate **safely, transparently, and responsibly**.

8. Implementation Roadmap

Finally, present a **high-level roadmap for implementing the AI solution**.

You may structure this using the phases defined earlier.

Phase 1 – Pilot Implementation

Test the AI solution within a controlled operational environment.

Phase 2 – Scaled Deployment

Expand the system across teams, departments, or operational units.

Phase 3 – Autonomous Expansion

Increase automation and integrate AI capabilities across multiple workflows.

This roadmap demonstrates how the organisation moves from **AI experimentation to operational adoption**.

Practical Tips

Focus on Business Outcomes

Your proposal should emphasise **business impact and operational improvement**, not only technical design.

Integrate Earlier Work

Use the outputs from earlier modules as the **foundation of your final proposal**, refining them into a cohesive narrative.

Write for an Executive Audience

Structure the report so that organisational leaders can quickly understand:

- the problem
- the proposed solution

- the expected value
- the implementation plan

Avoid These Common Mistakes

- ✗ Treating the final report as a completely new assignment
- ✗ Copying earlier module responses without synthesising them
- ✗ Focusing only on technical details instead of business value
- ✗ Ignoring financial or governance considerations

Strong executive proposals clearly demonstrate **strategic value, operational feasibility, and responsible AI deployment.**

Submission

Before submitting your **Executive AI Transformation Proposal**, confirm that you have included:

- ✓ Problem overview and organisational context
- ✓ Current workflow baseline
- ✓ Generative AI opportunity and redesigned workflow
- ✓ AI agent architecture and automation design
- ✓ Financial impact analysis
- ✓ Strategic alignment discussion
- ✓ Governance and risk management framework
- ✓ Implementation roadmap

Instructions:

- Use the same document that you downloaded in Module 1 and include your responses.
- We recommend you add additional text boxes or slides (if needed) for each milestone task to ensure that your responses are documented in a proper format.
- The document has now grown into a final submission file which you must **submit as a pdf at the end of this module.**

- Kindly add the following details at the beginning of your submission file:

Name:

Batch/Cohort:

Date of Submission:

Note: It is recommended to review the grading rubrics before submitting to ensure all components of the rubrics are addressed in the submission document.

Grading Rubric

Maximum Points: 25

Criteria	Full Points	0 Points
Problem Overview (3 points)	The submission clearly describes the business problem and explains why it is important to the organisation. (3 points)	The business problem and its importance are missing. (0 points)
Workflow Baseline (3 points)	The submission describes the current workflow, including key steps, manual work and operational challenges. (3 points)	The current workflow and operational challenges are missing. (0 points)
Generative AI Opportunity (3 points)	The submission explains how Generative AI can improve the workflow and identifies the tasks performed by AI and humans. (3 points)	The Generative AI opportunity and redesigned workflow are missing. (0 points)
Agent Design (3 points)	The submission describes the AI agent architecture, including key workflow steps, tool integrations and human oversight. (3 points)	The AI agent architecture and workflow design are missing. (0 points)

Criteria	Full Points	0 Points
Financial Impact (3 points)	The submission explains the expected financial impact, including efficiency gains, cost savings or return on investment. (3 points)	The financial impact and expected business value are missing. (0 points)
Strategy Alignment (3 points)	The submission explains how the AI initiative supports the organisation's strategic objectives and business priorities. (3 points)	The strategic alignment of the AI initiative is missing. (0 points)
Governance & Risk Management (4 points)	The submission describes the key governance controls and risk management measures required for the AI solution. (4 points)	The governance controls and risk management measures are missing. (0 points)
Implementation Roadmap (3 points)	The submission describes how the AI solution will progress from pilot implementation to scaled deployment and autonomous expansion. (3 points)	The implementation roadmap and deployment phases are missing. (0 points)

Why This Final Milestone Matters

Designing AI solutions requires more than understanding technology.

Organisations need professionals who can:

- identify high-value AI opportunities
- design practical AI-enabled workflows
- evaluate financial and strategic impact
- deploy AI responsibly within enterprise environments

This capstone demonstrates your ability to **translate AI capabilities into real business transformation initiatives**.

Your final proposal represents a **complete AI solution design**, integrating strategy, technology, governance, and operational impact.

IIMI GAAI Capstone Grading Rubric

Criteria	Ratings		Pts
Business Context	2 pts Full Marks The submission includes a description of the organisation/department, business function, and workflow importance.	0 pts No Marks The business context is completely missing.	2 pts
Current Workflow Summary	2 pts Full Marks The submission includes a outline of workflow steps, roles, and tools used.	0 pts No Marks The workflow summary is completely missing.	2 pts
Workflow Challenges	2 pts Full Marks The submission includes identification of key operational challenges.	0 pts No Marks The workflow challenges are completely missing.	2 pts
Relevance of Generative AI	3 pts Full Marks The submission includes a explanation of how Generative AI can support the workflow.	0 pts No Marks The explanation of Generative AI relevance is completely missing.	3 pts
Agentic AI Consideration	2 pts Full Marks The submission includes a statement on whether agentic AI is required, with basic reasoning.	0 pts No Marks The consideration of agentic AI is completely missing.	2 pts
Type of Business Impact	2 pts Full Marks The submission includes identification of the primary business impact (efficiency, revenue, risk, or decision support).	0 pts No Marks The type of business impact is completely missing.	2 pts
Initial Value Hypothesis	2 pts Full Marks The submission includes an estimate of potential improvement (time, cost, efficiency, etc.).	0 pts No Marks The initial value hypothesis is completely missing.	2 pts
Current Workflow Steps	2 pts Full Marks	0 pts No Marks	2 pts

Criteria	Ratings		Pts
	The submission includes the current workflow steps in sequence.	Current workflow steps are missing.	
Manual vs Automated Task Identification	2 pts Full Marks The submission identifies which tasks are manual and which are automated.	0 pts No Marks Manual vs automated tasks are not identified.	2 pts
Workflow Bottlenecks	2 pts Full Marks The submission identifies key bottlenecks or inefficiencies in the workflow with reasonable explanation.	0 pts No Marks Workflow bottlenecks are missing.	2 pts
Baseline Metrics	3 pts Full Marks The submission includes baseline estimates such as time, cost or error rates.	0 pts No Marks Baseline metrics are missing.	3 pts
Expected Generative AI Outputs	3 pts Full Marks The submission defines the expected outputs from Generative AI within the workflow.	0 pts No Marks Expected Generative AI outputs are missing.	3 pts
AI Limitations and Risks	3 pts Full Marks The submission identifies key limitations and risks of using Generative AI.	0 pts No Marks AI limitations and risks are missing.	3 pts
Problem Understanding & Need for Advanced Prompting	3 pts Full Marks The submission explains the business problem, demonstrates understanding of its complexity, and justifies why basic prompting is insufficient, highlighting the need for structured reasoning.	0 pts No Marks Problem complexity is not explained. No justification for using advanced prompting techniques.	3 pts
Prompt Design & Advanced Techniques Application	4 pts Full Marks The submission includes prompts (CoT, Few-shot CoT, decomposition) and applies at least two advanced techniques (e.g. ToT, ReAct, self-consistency).	0 pts No Marks Prompts are missing, incomplete, or do not demonstrate use of advanced techniques.	4 pts

Criteria	Ratings		Pts
Workflow Design, Guardrails & Output Control	4 pts Full Marks The submission presents a multi-step prompt workflow (pipeline), including logical sequencing. Guardrails (constraints, hallucination control) and structured output formats (e.g. JSON/table) are defined.	0 pts No Marks Workflow is missing. No guardrails, constraints, or output structure defined.	4 pts
Evaluation, Accuracy & Trade-offs	4 pts Full Marks The submission compares techniques based on accuracy, consistency, and reliability. Identifies the best-performing approach, key improvements, and clearly explains trade-offs (e.g. cost, latency, complexity).	0 pts No Marks No evaluation or comparison provided. Performance, improvements, and trade-offs are not discussed.	4 pts
Identification of Repetitive Workflow Tasks	4 pts Full Marks The submission identifies five repetitive tasks within the selected workflow that are suitable for Generative AI-based improvement.	0 pts No Marks Workflow tasks are missing.	4 pts
Time Savings Estimation	4 pts Full Marks The submission includes estimates for percentage of time saved and annual hours saved for all identified tasks. Calculations are clearly presented.	0 pts No Marks Time-saving estimates or annual hours calculations are missing.	4 pts
Cost Per Hour & Annual Cost Reduction	4 pts Full Marks The submission includes estimated employee cost per hour and annual cost reduction calculations for the identified tasks. Financial estimates are logical and clearly presented.	0 pts No Marks Cost assumptions or annual cost reduction calculations are missing.	4 pts
Implementation Cost Estimation	4 pts Full Marks The submission includes estimates of AI implementation costs, such as software, setup, integration, or training costs.	0 pts No Marks Implementation cost estimates are missing.	4 pts
3-Year ROI Estimation	4 pts Full Marks The submission includes a calculated 3-year ROI estimate based on projected savings and implementation	0 pts No Marks ROI calculations are missing.	4 pts

Criteria	Ratings		Pts
	investment.		
Current-State Workflow Diagram	4 pts Full Marks The submission clearly presents the existing workflow with sequencing of activities and identifies human or system interactions within the process.	0 pts No Marks Current-state workflow diagram is missing.	4 pts
AI-Enabled Future-State Workflow Diagram	4 pts Full Marks The submission presents a redesigned AI-enabled workflow showing process transformation, AI integration, and improved coordination or automation across workflow stages.	0 pts No Marks AI-enabled future-state workflow diagram is missing.	4 pts
AI-Enabled Capabilities Identification	3 pts Full Marks The submission identifies new capabilities introduced through AI, such as automation, predictive insights, intelligent coordination, or AI-assisted decision-making.	0 pts No Marks AI-enabled capabilities are missing	3 pts
Business Impact Explanation	4 pts Full Marks The submission explains the impact of the redesigned workflow on revenue generation, customer experience (CX), and competitive positioning.	0 pts No Marks Business impact explanation is missing.	4 pts
Agent Objective & Workflow Design	4 pts Full Marks The submission defines the agent objective, business context, and workflow supported by the agent. The workflow steps are clearly presented.	0 pts No Marks Agent objective, business context, or workflow design is missing.	4 pts
Planning Workflow, Tools & Memory Design	4 pts Full Marks The submission includes a step-by-step planning workflow, relevant tool integrations, and a memory design. The role of each component is explained.	0 pts No Marks Planning workflow, tool integrations, or memory design are missing.	4 pts
Autonomy Level & Human Oversight	4 pts Full Marks The submission defines the agent's autonomy level, identifies human involvement points,	0 pts No Marks Autonomy level, human oversight, or governance	4 pts

Criteria	Ratings		Pts
	and explains governance or oversight mechanisms	considerations are missing.	
Execution Cost Estimation	3 pts Full Marks The submission includes a estimate of execution cost per task or transaction. Cost assumptions and calculations are presented.	0 pts No Marks Execution cost estimates or calculations are missing.	3 pts
Automated vs Human-Controlled Workflow Steps	2 pts Full Marks The submission identifies which workflow steps are handled by AI and which remain human-controlled.	0 pts No Marks Workflow steps are not defined.	2 pts
Human Approval Checkpoints	2 pts Full Marks The submission defines where human review or approval is required before actions are executed.	0 pts No Marks Human approval checkpoints are missing.	2 pts
Escalation Rules	2 pts Full Marks The submission explains how the system handles uncertain outputs, complex cases and operational failures with clear escalation logic.	0 pts No Marks Escalation rules are missing.	2 pts
Override Mechanisms	2 pts Full Marks The submission describes how humans can modify, override or reject AI outputs.	0 pts No Marks Override mechanisms are missing.	2 pts
Responsibility Matrix	2 pts Full Marks The submission includes a responsibility matrix showing ownership of AI system operations, human review tasks and final accountability.	0 pts No Marks Responsibility matrix is missing.	2 pts
Event-Triggered Autonomous Workflow	3 pts Full Marks The submission defines an event-triggered autonomous workflow, including triggering events, agent actions, workflow progression, and execution outcomes	0 pts No Marks Event-triggered autonomous workflow is not defined.	3 pts

Criteria	Ratings		Pts
Tool Orchestration Explanation	3 pts Full Marks The submission explains how agents interact with enterprise systems, tools, APIs, databases, or external applications to execute workflow activities.	0 pts No Marks Tool orchestration and system interactions are missing	3 pts
Failure Simulation Scenarios	3 pts Full Marks The submission explains how the autonomous system responds to workflow failures, uncertain outputs, missing information, or execution errors through failure scenarios.	0 pts No Marks Failure simulation scenarios are missing.	3 pts
Escalation Path for Operational Issues	3 pts Full Marks The submission defines escalation paths for operational issues, including conditions that trigger escalation, responsible stakeholders, and escalation actions.	0 pts No Marks Escalation paths for operational issues are missing.	3 pts
Monitoring Strategy for System Performance	3 pts Full Marks The submission defines mechanisms for monitoring autonomous system performance, including performance metrics, alerts, reporting, and continuous oversight processes.	0 pts No Marks Monitoring strategy for system performance is missing.	3 pts
Identification of AI Initiatives	3 pts Full Marks The submission identifies three AI initiatives, including the capstone use case, and describes the business objective and strategic relevance of each initiative.	0 pts No Marks Three AI initiatives, including the capstone use case, are not identified.	3 pts
Strategic Comparison of AI Initiatives	6 pts Full Marks The submission compares the three AI initiatives using strategic criteria such as feasibility, ROI, implementation risk, and strategic impact, and presents an evaluation to support decision-making.	0 pts No Marks Strategic comparison across feasibility, ROI, implementation risk, and strategic impact is missing.	6 pts
Prioritisation Decision	3 pts Full Marks	0 pts No Marks	3 pts

Criteria	Ratings		Pts
	The submission justifies the prioritisation of one AI initiative using appropriate business reasoning, strategic alignment, and expected organisational value.	Prioritisation decision or supporting justification is missing.	
Investment and Change Management Considerations	3 pts Full Marks The submission explains the investment considerations, resource requirements, stakeholder engagement, and change management activities required to successfully implement the prioritised AI initiative.	0 pts No Marks Investment considerations or change management activities are missing.	3 pts
Company 1 Benchmark	4 pts Full Marks The submission clearly describes the AI implementation, business use case, implementation scale, and reported outcomes for the first organisation, demonstrating relevance to the selected industry.	0 pts No Marks The benchmark for the first organisation is missing.	4 pts
Company 2 Benchmark	4 pts Full Marks The submission clearly describes the AI implementation, business use case, implementation scale, and reported outcomes for the second organisation, demonstrating relevance to the selected industry.	0 pts No Marks The benchmark for the second organisation is missing.	4 pts
Key Insights for the AI Solution	4 pts Full Marks The submission identifies meaningful lessons from both industry benchmarks and clearly explains how these insights strengthen or refine the proposed capstone AI solution.	0 pts No Marks The key insights are missing.	4 pts
Competitive Positioning Reflection	3 pts Full Marks The submission reflects on how the proposed AI solution compares with current industry practices and explains its potential competitive positioning or strategic advantage.	0 pts No Marks Reflection on competitive positioning or comparison with current industry practices is missing.	3 pts
AI Architecture Overview	3 pts Full Marks The submission explains the overall AI architecture and describes how the proposed solution will be deployed within an enterprise environment.	0 pts No Marks The AI architecture overview is missing.	3 pts
Vendor Ecosystem	3 pts	0 pts	3 pts

Criteria	Ratings		Pts
	Full Marks The submission identifies the required vendor ecosystem and explains the role of the different platforms or technology providers needed to support the AI solution.	No Marks The vendor ecosystem and the role of the required platforms is not identified.	
Build vs Buy vs Partner Decision	4 pts Full Marks The submission explains the Build vs Buy vs Partner decisions for the AI solution and justifies the selected approach for the major components.	0 pts No Marks The Build vs Buy vs Partner decisions or supporting justification are missing.	4 pts
Data & Integration Architecture	4 pts Full Marks The submission explains the data architecture, data flow, and integration with enterprise systems required to support the AI solution.	0 pts No Marks The data architecture and system integration is missing.	4 pts
Security Layer	3 pts Full Marks The submission explains the security considerations, including access control, data protection, and governance mechanisms required for the AI solution.	0 pts No Marks Security considerations and governance mechanisms are missing.	3 pts
Estimated Implementation Budget	3 pts Full Marks The submission provides a high-level implementation budget, including the major cost categories required to deploy the AI solution.	0 pts No Marks The implementation budget and major cost categories are missing.	3 pts
AI Risk Identification	4 pts Full Marks The submission identifies the key AI risks associated with the proposed AI solution.	0 pts No Marks The key AI risks associated with the AI solution are missing.	4 pts
Governance Controls	5 pts Full Marks The submission explains the governance controls for data privacy, hallucination mitigation, and bias monitoring required for the AI solution.	0 pts No Marks The governance controls for data privacy, hallucination mitigation, and bias monitoring are missing.	5 pts

Criteria	Ratings		Pts
Monitoring & Audit Processes	4 pts Full Marks The submission explains the monitoring processes, audit trail, and traceability mechanisms required to monitor the AI solution.	0 pts No Marks The monitoring processes, audit trail, and traceability mechanisms are missing.	4 pts
Incident Response Strategy	4 pts Full Marks The submission explains the incident response strategy for detecting, managing, and resolving AI system failures or unexpected behaviour.	0 pts No Marks The incident response strategy is missing.	4 pts
Regulatory & Compliance Considerations	3 pts Full Marks The submission identifies the relevant regulatory or compliance considerations for the AI solution.	0 pts No Marks The regulatory or compliance considerations are missing.	3 pts
Phase 1 – Pilot Implementation	4 pts Full Marks The submission describes the pilot implementation of the AI solution.	0 pts No Marks The pilot implementation is missing.	4 pts
Phase 2 – Scaled Deployment	4 pts Full Marks The submission describes how the AI solution will be scaled across the organisation.	0 pts No Marks The scaled deployment strategy is missing.	4 pts
Phase 3 – Autonomous Expansion	4 pts Full Marks The submission describes how the AI solution can evolve towards greater autonomy and intelligence.	0 pts No Marks The autonomous expansion plan is missing.	4 pts
Future AI Capability Enhancements	3 pts Full Marks The submission identifies future AI capabilities that could enhance the solution.	0 pts No Marks The future AI capability enhancements are missing.	3 pts
Problem Overview	3 pts Full Marks	0 pts No Marks	3 pts

Criteria	Ratings		Pts
	The submission clearly describes the business problem and explains why it is important to the organisation.	The business problem and its importance are missing.	
Workflow Baseline	3 pts Full Marks The submission describes the current workflow, including key steps, manual work and operational challenges.	0 pts No Marks The current workflow and operational challenges are missing.	3 pts
Generative AI Opportunity	3 pts Full Marks The submission explains how Generative AI can improve the workflow and identifies the tasks performed by AI and humans.	0 pts No Marks The Generative AI opportunity and redesigned workflow are missing.	3 pts
Agent Design	3 pts Full Marks The submission describes the AI agent architecture, including key workflow steps, tool integrations and human oversight.	0 pts No Marks The AI agent architecture and workflow design are missing.	3 pts
Financial Impact	3 pts Full Marks The submission explains the expected financial impact, including efficiency gains, cost savings or return on investment.	0 pts No Marks The financial impact and expected business value are missing.	3 pts
Strategy Alignment	3 pts Full Marks The submission explains how the AI initiative supports the organisation's strategic objectives and business priorities.	0 pts No Marks The strategic alignment of the AI initiative is missing.	3 pts
Governance & Risk Management	4 pts Full Marks The submission describes the key governance controls and risk management measures required for the AI solution.	0 pts No Marks The governance controls and risk management measures are missing.	4 pts
Implementation Roadmap	3 pts Full Marks The submission describes how the AI solution will progress from pilot implementation to scaled deployment and autonomous expansion.	0 pts No Marks The implementation roadmap and deployment phases are missing.	3 pts
