Learning Outcomes Addressed

- Understand how AI, GenAI and Agentic AI work and where they apply in business.
- Use prompts effectively for analysis, decision-making and content generation.
- Map business workflows and identify where AI can drive automation and efficiency.
- Evaluate AI opportunities using feasibility, ROI and impact criteria.
- Build AI adoption roadmaps aligned to business goals and KPIs.
- Apply data governance, privacy and ethical AI principles.

Phase 2 – Efficiency & Disruptive Impact

Milestone 5: Future-State Workflow Redesign

Estimated Effort: 1.5 Hours

Objective

In the previous module, you estimated the **efficiency and financial impact of using Generative AI** to improve tasks within your selected workflow.

However, Generative AI does not only improve existing processes — it can also **fundamentally redesign how work is performed**.

In this module, you will explore how Generative AI can create **disruptive innovation within business workflows**.

Instead of simply inserting AI into existing steps, you will redesign the workflow to reflect how AI systems, automation, and intelligent agents could transform how the process operates.

You will create a **Future-State Workflow Redesign**, comparing the current workflow with an AI-enabled version that unlocks new capabilities

Note: This is a required assignment and counts towards programme completion.

Task Overview

Using the workflow you selected earlier in the capstone, create two diagrams:

1. **Current-State Workflow Diagram**
2. **AI-Enabled Future-State Workflow Diagram**

You will then identify the **new capabilities created by AI** and explain how the redesigned workflow could impact:

- revenue generation
- customer experience (CX)
- competitive positioning

The goal is to demonstrate how Generative AI can **transform workflows**, not just automate individual tasks.

Step 1 — Create the Current-State Workflow Diagram

Start by visualising the **existing workflow you analysed in Module 2**.

The diagram should show:

- the main process steps
- who performs each step (human or system)
- the sequence of activities

Your diagram does not need to be complex.

You may use:

- a simple flowchart
- numbered steps
- a basic process diagram

Example Structure (Illustrative)

Customer Support Workflow

Customer submits support request

- Agent reviews request manually
- Agent categorises issue
- Agent searches knowledge base
- Agent drafts response
- Response sent to customer

This represents the **current operational structure of the process**.

Step 2 — Design the AI-Enabled Future-State Workflow

Next, redesign the workflow assuming **Generative AI tools and AI agents are available**.

Consider how AI could:

- remove certain steps
- accelerate decision-making
- automate information analysis
- coordinate actions across systems

The goal is **not to simply insert AI into existing steps**, but to rethink how the process could operate more efficiently.

Example Structure (Illustrative)

AI-Enabled Customer Support Workflow

Customer submits request

- AI automatically classifies issue
- AI generates response draft
- Agent reviews AI draft
- Response sent to customer

In this version:

- classification becomes automated
 - response drafting becomes AI-assisted
 - agent effort focuses on review rather than creation
-

Step 3 — Identify New Capabilities Enabled by AI

Next, list **new capabilities that the AI-enabled workflow introduces**.

These may include capabilities that did not exist in the original workflow.

Examples include:

- automated document analysis
- AI-generated responses or reports
- real-time recommendations
- predictive insights
- automated coordination across systems

Your list should highlight how AI enables **new ways of performing the work**.

Step 4 — Explain the Business Impact

Finally, explain how the redesigned workflow could affect the organisation.

Focus on three types of impact.

Revenue Impact

Consider whether the AI-enabled workflow could:

- increase sales capacity
- accelerate deal cycles
- improve lead conversion
- enable new services

Example:

Faster proposal generation allows sales teams to respond to more customer opportunities.

Customer Experience (CX) Impact

Consider whether the workflow redesign could improve:

- response speed
- service quality
- personalisation
- reliability

Example:

AI-assisted support responses reduce response time from hours to minutes.

Competitive Positioning

Consider whether the redesigned workflow could help the organisation:

- operate faster than competitors
- deliver superior service quality
- scale operations more efficiently

Example:

Automated knowledge analysis allows support teams to resolve issues faster than competitors relying on manual processes.

Transformation Patterns to Consider

When redesigning the workflow, look for three types of transformation.

Speed Transformation

Processes become **dramatically faster**.

Example:

AI summarises documents instantly instead of manual reading.

Decision Transformation

AI assists employees in **complex decisions or evaluations**.

Example:

AI analyses multiple proposals and highlights recommended options.

Coordination Transformation

AI agents help **coordinate multi-step workflows across systems**.

Example:

An AI system gathers information from multiple databases and prepares a decision summary automatically.`

Practical Tips

Focus on Structural Change

Avoid simply inserting AI into existing steps.

Instead, consider:

- which steps could disappear
 - which decisions could become AI-assisted
 - which tasks could be automated entirely
-

Use Clear Diagrams

Your diagrams should make it easy to see:

- the flow of activities
- where AI is involved
- how the process changes

Clarity is more important than visual complexity.

Connect to Earlier Modules

Your redesign should reflect insights from earlier modules:

- workflow analysis from **Module 2**
- AI prompts designed in **Module 3**
- efficiency improvements estimated in **Module 4**

Avoid These Common Mistakes

- ✗ Simply inserting AI into existing steps without redesign
- ✗ Creating unrealistic fully autonomous systems without oversight

✗ Ignoring the role of human review and governance

Effective AI workflows typically involve **human–AI collaboration**, not full automation.

Submission

Before submitting your **Future-State Workflow Redesign**, confirm that you have included:

- ✓ Current-state workflow diagram
- ✓ AI-enabled future-state workflow diagram
- ✓ List of new AI-enabled capabilities
- ✓ Explanation of business impact on revenue, CX, and competition

Instructions:

- Use the same document that you downloaded in Module 1 and include your responses.
- We recommend you add additional text boxes or slides (if needed) for each milestone task to ensure that your responses are documented in a proper format.
- The document will gradually grow as you complete each capstone milestone. The final submission occurs at the end of Module 14.

Grading Rubric

Maximum Points: 15

Criteria	Full Points	0 Points
Current-State Workflow Diagram (4 points)	The submission clearly presents the existing workflow with sequencing of activities and identifies human or system interactions within the process. (4 points)	Current-state workflow diagram is missing. (0 points)

Criteria	Full Points	0 Points
AI-Enabled Future-State Workflow Diagram (4 points)	The submission presents a redesigned AI-enabled workflow showing process transformation, AI integration, and improved coordination or automation across workflow stages. (4 points)	AI-enabled future-state workflow diagram is missing. (0 points)
AI-Enabled Capabilities Identification (3 points)	The submission identifies new capabilities introduced through AI, such as automation, predictive insights, intelligent coordination, or AI-assisted decision-making. (3 points)	AI-enabled capabilities are missing. (0 points)
Business Impact Explanation (4 points)	The submission explains the impact of the redesigned workflow on revenue generation, customer experience (CX), and competitive positioning. (4 points)	Business impact explanation is missing. (0 points)

Why this Step Matters

Efficiency improvements are only one dimension of AI impact.

The most powerful organisations use AI to **rethink how work is structured**.

This exercise helps you learn how to:

- redesign workflows using AI capabilities
- identify new operational possibilities
- evaluate strategic impact beyond cost savings

In the next module, you will bring together all the insights from this capstone to propose a **comprehensive AI-enabled transformation strategy**.
